Indian Traffic Rules: Signals and Road Signs

Short reference document for RAG testing

This document summarizes common road-signal and road-sign practices in India for educational use. Always follow the signs, signals, and directions applicable to the road you are using.

Traffic signals

- Red light: stop before the stop line or at the marked stopping point. Do not enter the junction until permitted.
- Amber/yellow light: prepare to stop if it is safe to do so. Do not accelerate to beat the signal.
- Green light: proceed only when the way is clear and it is safe. Give way to pedestrians and traffic that has lawful priority.
- A green signal does not permit blocking an intersection. Keep the junction clear.

Common road signs and markings

- STOP signs require a driver to stop and proceed only when safe.
- Give Way signs require drivers to slow down and yield as indicated by the sign and road layout.
- Speed-limit signs show the maximum permitted speed for that stretch, subject to other restrictions and safe conditions.
- A continuous solid line generally indicates a restriction on crossing or changing lanes; follow the specific marking and local rules.
- Follow one-way, no-entry, no-parking, U-turn, and turn-restriction signs.

At junctions and crossings

- Slow down when approaching intersections and watch for pedestrians, cyclists, and two-wheelers.
- Use marked pedestrian crossings where available and yield as required by signals and applicable rules.
- Do not stop or park where doing so obstructs a crossing, junction, or traffic flow.

Note: This is a simplified learning aid, not a complete statement of Indian law. Road signs, temporary traffic orders, and local enforcement directions may impose additional requirements.
