Indian Traffic Rules: Speed, Overtaking and Parking

Short reference document for RAG testing

Drivers must adjust their behaviour to road conditions and obey posted restrictions. These examples are intended for basic RAG retrieval exercises.

Speed and following distance

- Do not exceed the applicable speed limit displayed for the road and vehicle category.
- Reduce speed near schools, hospitals, roadworks, sharp bends, crossings, crowded areas, and in poor visibility.
- Maintain enough following distance to stop safely if the vehicle ahead brakes suddenly.
- A posted speed limit is a maximum, not a guarantee that travelling at that speed is safe in every condition.

Overtaking and lane discipline

- Overtake only when permitted, visibility is adequate, and there is sufficient clear space to complete the manoeuvre safely.
- Do not overtake where signs or road markings prohibit it, or where the manoeuvre would endanger other road users.
- Use indicators before turning or changing lanes, and check mirrors and blind spots.
- Avoid abrupt lane changes and do not use a mobile phone in a way that distracts you from driving.

Parking and stopping

- Do not park in no-parking zones, on pedestrian crossings, or where your vehicle obstructs traffic or access.
- Follow local signs and restrictions for bus stops, junctions, bridges, emergency access, and designated parking areas.
- Before opening a vehicle door, check for approaching cyclists, motorcyclists, and other traffic.

Penalties and local rules

- Traffic offences may lead to fines or other legal consequences under applicable law.
- The exact penalty depends on the offence, the law in force, and relevant state or local provisions.
- Do not rely on a generic list of fines without checking the latest official notification for the state or union territory.

Note: This document intentionally avoids listing specific fine amounts because penalties and enforcement details can change. Consult current official sources for exact legal requirements.
